### Resolved Issues:

#### CSP1 (Build# 362685)

BUG59979, BUG66060: Resolved issue causing the loggerd process to use a high percentage of CPU.

BUG70204: Resolved issue causing low memory condition when using FireCluster Active / Passive.

BUG71028: When using FireCluster Active/Passive, with DHCP relay enabled, the Virtual MAC address will no longer be sent from the Backup Master causing network disruption.

BUG70975: The SNMP process on XTM 25/26 and XTM 33 will now be restarted automatically in the event it becomes stuck in a dormant state.

BUG71057: Resolved issue causing web browsing to fail when using the Websense option for WebBlocker.

BUG71018: When using Application Control, you can now set a main category to Drop while you have a sub category set to Allow.

BUG71044: Resolved issue causing log data to not show up in Traffic Monitor or the Syslog option in WebUI.

BUG71082: Resolved issue causing system memory gradually decreasing over time when using the HTTPS Proxy and WebBlocker.

BUG71024: Enabling App Control no longer causes the Proxy process to die unexpectedly on signal 11.
